PROFILE

Product engineer with high ownership: I take features from first sketch to release, and I stay with them after they ship, fixing what users run into and improving what they use most. I joined Activepieces in July 2022, before it went open source, and have spent four years helping turn it into the product it is today.

EXPERIENCE

Senior Product Engineer · Activepieces

Jul 2022 – Present

Open-source automation platform. Author of PR #1, the first flow builder frontend.

- **Flow builder.** Helped shape the visual editor where every automation is made: routing runs on conditions, looping over lists of data, success and failure paths on every step, step testing, drag and drop, copy and paste, a minimap for large flows, sticky notes, and vertical and horizontal layouts. [Try it on Cloud ↗](#)
#5955 #6315 #13074 #13661
- **React rewrite.** Top contributor to moving the frontend from Angular to React, a major refactor that took a careful eye for detail.
- **Embedding and white-labelling.** Made it possible to embed Activepieces in other SaaS products through an embed SDK and iframe, white-labelled to fit the host product, with companies' own OAuth2 apps for their customers' connections, so the whole experience carries their brand. [Live embed demo ↗](#)
#3085 #3171 #4115 #7405
- **Billing.** Moved billing to [Autumn](#), where it is now fully managed: sales can change features and limits and customers' entitlements update instantly, whether they self-host or use Cloud, with Stripe invoices linked to each account. #14436 #14729 #15494
- **AI.** A copilot for code steps, one place for users to manage their AI provider keys, image generation, the universal AI step, MCP servers and an agent builder. #6061 #5673
- **Tables and translations.** Built Google Sheets-like tables inside Activepieces and the pipeline that translates every integration into the languages the product supports. #7142 #8462
- **Admin controls.** Gave platform admins more control: required actions every flow must include before it publishes, per-company telemetry settings, and integration versions that only change when users choose to upgrade. #15952 #15159 #12214
- **Engineering.** Contributed to the team's AI coding workflow: one shared AGENTS.md for Claude and Cursor, rules and skills, and a pre-push lint and test gate. #12100 #12113 #12564

Web & Game Developer · Babil Games

Jan 2021 – Jul 2022

- Maintained and built the company's websites, wrote Unreal Engine 4 tools for the art team, prototyped multiplayer games in C++ and Blueprints, and built integrations and browser extensions that other teams relied on.

Junior Software Engineer · Sky Software

Jul 2018 – Sep 2019

- Full-stack work on QMS, a hotel management product: an Angular single-page app on a .NET REST API. Also streamlined how the product was packaged and deployed with Advanced Installer.

EDUCATION

Philadelphia University · Amman

2016 - 2020

- Graduated top of the IT faculty, on a full scholarship.

High school · IT branch

- 8th highest average in the Kingdom of Jordan.

SKILLS

Languages	TypeScript, JavaScript, C++
Frontend	React, Angular, Zustand, TanStack Query, React Flow, Tailwind CSS
Backend	Node.js, Fastify, Zod, PostgreSQL, Redis
Practices	Product ownership end to end, typed API contracts, CI and releases, AI-assisted engineering

SELECTED WORK

A builder that can express any automation

Branching, loops and error handling, built visually.

Activepieces inside other products

Embedding, white-labelling and an embed SDK.

Moving billing to Autumn

One billing model for Cloud and self-hosted, AI billed by cost.

Code copilot

An early AI assistant that writes code steps from plain English.
